```

- Distributions like Grade and Sub Grade can be converted to numerical columns based on their impact on the loan status.
- Features like pub_rec, pub_rec_bankruptcies, mort_acc can be converted to categorical columns
- Anual Income, Revol_util, dti, revol_bal have Outliers that can be handled with more care.

In [ ]: from sklearn.impute import KNNImputer
         # Handling missing emp_length
         # Identify numeric and categorical columns
```

Instead of selecting all numeric columns, seting as per business understanding

df_numeric_imputed = pd.DataFrame(knn_imputer.fit_transform(df_numeric), columns=numeric_columns)

numeric columns = df.select dtypes(include='number').columns

Impute missing values in the numeric part using KNNImputer

Extract the numeric part of the DataFrame

knn imputer = KNNImputer(n neighbors=10)

df_numeric = df[numeric_columns]

df.isnull().sum()

numeric_columns = ["loan_amnt", "annual_inc", "emp_length", "mort_acc"]

Combine the imputed numeric part with the original categorical part

df = pd.concat([df.drop(columns=numeric_columns), df_numeric_imputed], axis=1)
